Assignment 2:

Systemic Games with Emergent Systems

Course: GAME 10017 Game Systems Design

Professor: Raphaël Tétreault

Designer: Alex DiFlaviano

Object: Button

Yellow Button	
Green Button	
Properties	• Button Ability: Either pressed or unpressed • Buttons can either be yellow or green
Behaviors	• Yellow button calls the elevator to where you are • Green button moves its corresponding hand on the clock to the 12 o'clock position

Game State Feedback	• Visual for Green
	  ○ Button changes to depressed state
	  ○ Hand on clock moves to 12 o'clock position
	• Visual for Yellow
	  ○ Button changes to depressed state
	  ○ Elevator moves up or down to your position
	• Audio
	  ○ Button moving sound plays
	  ○ Sound plays for elevator moving
	  ○ or
	  ○ Sound plays for clock hand moving

Systemic Feedback	• Pressing button triggers:
	  ○ Clock hand to move
	  ○ or
	  ○ Elevator to move

Object: Elevator

Elevator	Properties	• 3 elevators in the level • Each elevator will have a different amount of stops • Only activated by the yellow buttons
Behaviors	• Elevator only allows the player to access the floor they are on • Once the elevator is at the players floor they can choose what floor to go to

Game State Feedback	• Audio
	  ○ Elevator ding
	  ○ Noise of it moving
	• Visuals
	  ○ Metal mechanical look

Systemic Feedback	• Cannot move when the elevator is moving

Object: Clock

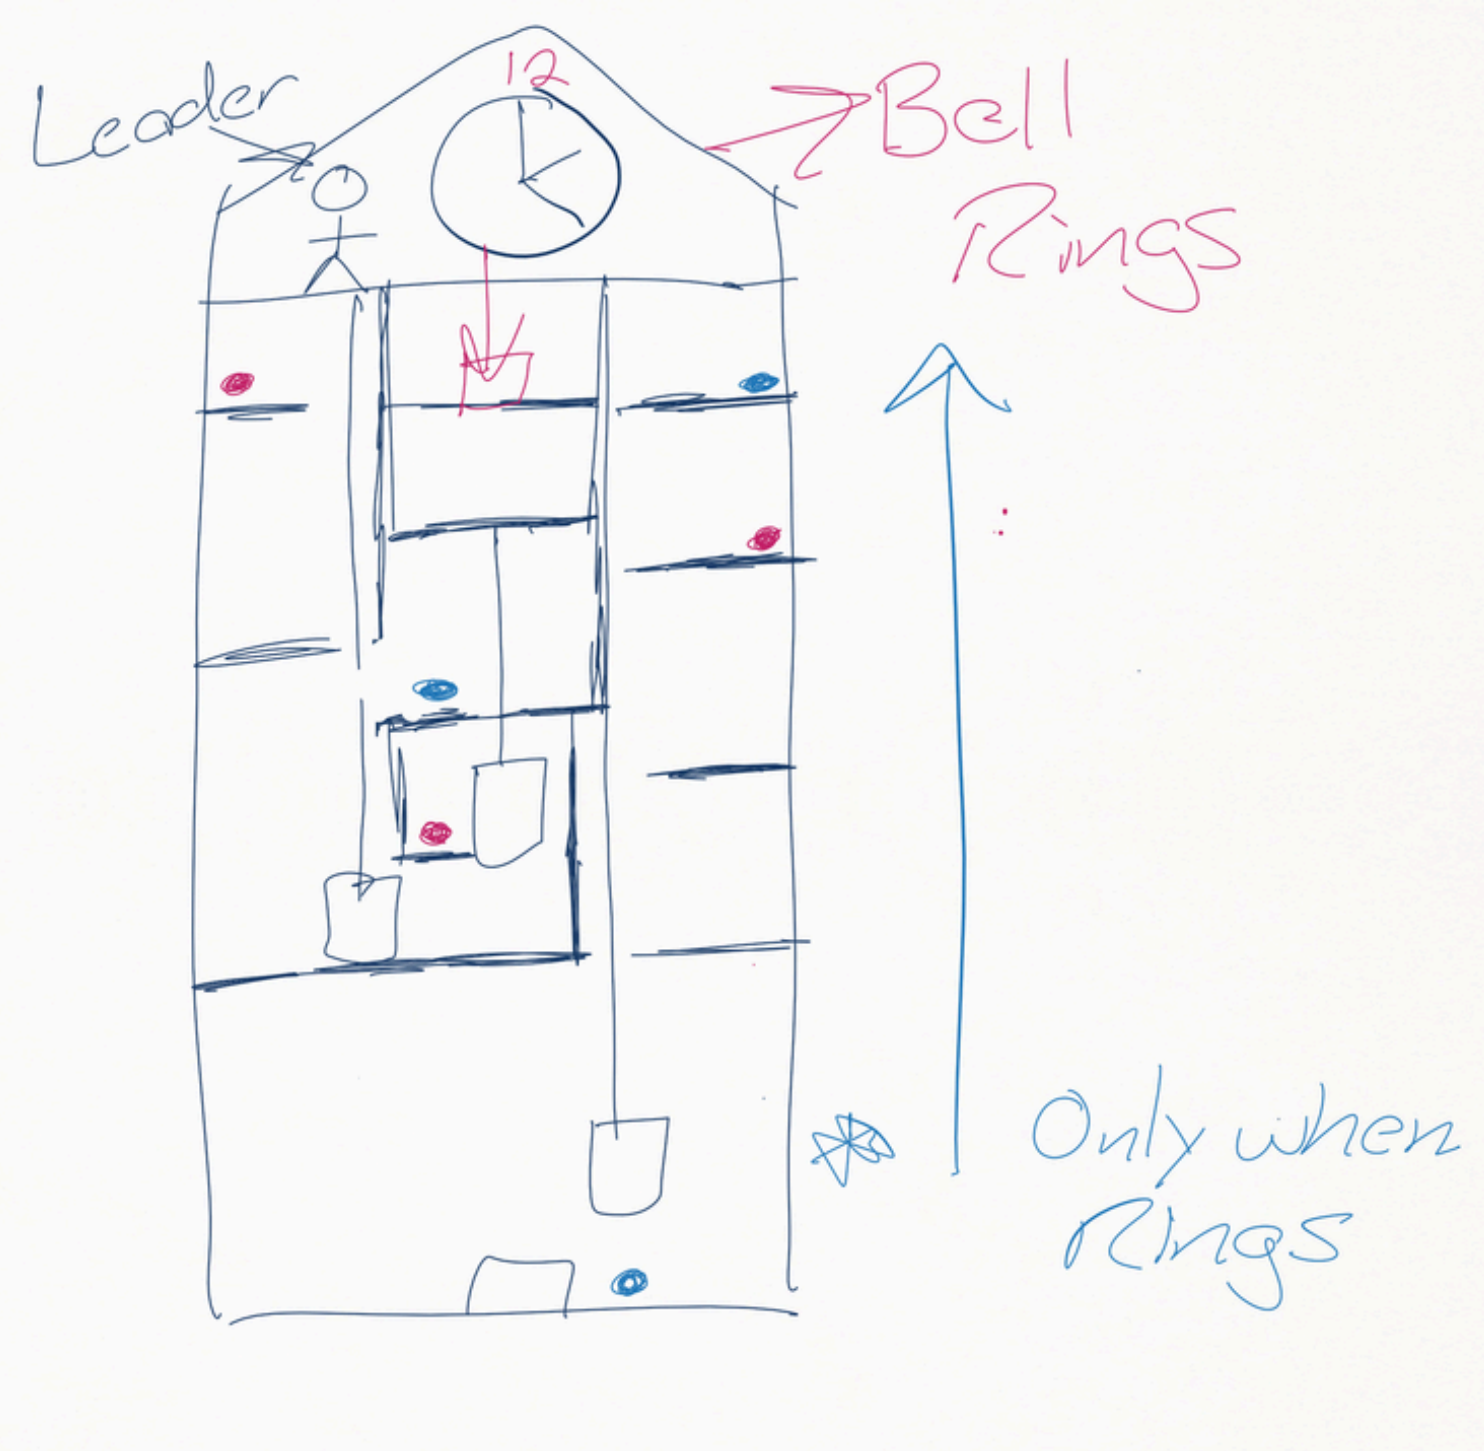
Clock	Properties	• Hands either moving or locked to 12 o'clock after the button is hit
Behaviors	• Hands can move around like a normal clock until they are locked via the puzzle

Game State Feedback	• Audio
	  ○ Clock tick
	  ○ Locking sound when hand locks to 12 o'clock
	• Visuals
	  ○ Mechanical lock

Systemic Feedback	• Cannot progress to the end of the level until all three hands are locked to 12 o'clock



Player starts at the bottom square and uses the button to call the first elevator. They are then tasked with finding the 3 buttons that set their corresponding hand to the 12 o'clock position. Once all three hands are at the 12 o'clock position the player can take an elevator to the top of the clock tower to access the final boss (gym leader).

Table of Contents

Q1. Justify Objects, Properties, Behaviors, and Relationships 7

1.0 Assumptions 7

1.1 Buttons 7

1.2 Elevators 7

1.3 Clock 7

Q2. Justify Emergence, Gameplay Possibility Space 8

Q1

1.0 Assumptions

This level is intended to be a Pokemon gym puzzle but can be used as a dungeon crawler level also where the player is attacking enemies themselves. The player will be able to walk around and attack enemies that are protecting the clock hand locking buttons. The player can interact with the buttons as well as the elevators.

1.1 Buttons

The Green and Yellow buttons are the players primary way of interacting with the level. The player will use these to activate the elevators to be able to move from floor to floor in the level. The buttons show that they have been pressed by becoming depressed from their initial state and playing a clicking noise. These buttons allow for the player to solve the puzzle by hitting the correct buttons to move the clock hands to the 12 o'clock position. The buttons trigger the behaviors of the other objects in the level.

1.2 Elevators

The elevator is the only way to move vertically in the level. The movement is triggered by clicking one of the yellow buttons. There is three elevators in this level. Each one of them grants access to different areas in the clock tower. Some of these areas will just have an enemy, others will have loot, and others will have another button. The elevators will give the player feedback via audio. The player will know that the elevator is moving because their movement will be locked but also they will hear the sound of the elevator moving. Once the elevator reaches a floor the elevator will ding. When the player reenters the elevator they will be able to choose what floor to go to from within.

1.3 Clock

The clock has three hands that are constantly moving. These hands can be locked at 12 o'clock by hitting one of the hidden green lock buttons throughout the level. The hands will be moving like normal until they are locked. Every time a hand locks there will be a loud locking sound. The hands must be locked in a specific order (Seconds → Minutes → Hours). The clock will be ticking throughout the level. The ticking will get quieter every time the player locks one of the hands. Once all the hands are locked there will be no ticking from the clock. Progression in this level is only allowed once all three hands are locked. Once this happens a new yellow button is revealed to allow the player to get all the way to the top of the tower to fight the final boss.

Q2

The objects that are used to make this level create an interesting puzzle that has the player moving around the level vertically trying to find the buttons to lock the clock hands. Even once the buttons are found the player must then figure out what order the buttons must be pressed in to progress through the level.
